

Radioactive decay

The half life of radioactive radon gas is 3.8 days. What is the rate constant for the radioactive decay of radon in s^{-1} ?

Radioactive decay

The half life of radioactive radon gas is 3.8 days. What is the rate constant for the radioactive decay of radon in s^{-1} ?

Step 1. Convert days to seconds.

$$\begin{aligned} 1 \text{ day} &= (24 \text{ hours})(3600 \text{ seconds/hour}) \\ &= 86400 \text{ seconds} \end{aligned}$$

Radioactive decay

The half life of radioactive radon gas is 3.8 days. What is the rate constant for the radioactive decay of radon in s^{-1} ?

Step 1. Convert days to seconds.

$$\begin{aligned} 1 \text{ day} &= (24 \text{ hours})(3600 \text{ seconds/hour}) \\ &= 86400 \text{ seconds} \end{aligned}$$

Step 2. use the definition of half life.

$$\begin{aligned} k &= \ln(2)/\tau^{1/2} = 0.697/328,320 \text{ s} \\ &= 2.12 \times 10^{-6} \text{ s}^{-1} \end{aligned}$$
